SYSTEM AND METHOD FOR ORGANIZING, PRESERVING, SHARING AND UPDATING VOLUMINOUS PERSONAL MEMOIRS AND FOR DYNAMIC ACCOUNTING OF ASSETS

ABSTRACT OF THE DISCLOSURE

A method is disclosed for storing personal records in a data processing system, such as personal photographs, video and audio recordings The personal records are first sorted into a preselected order defined according to a selected input scheme, and then input into a data processing system. Index codes are automatically assigned to the personal records, with the index codes corresponding to the sequence in which the personal records are input into the data processing system. The personal records are formatted for remote display and the personal records are automatically sorted according to the index codes. The personal records are grouped into display sets according to the assigned index codes, and display codes incorporated into the index codes. A display set of the personal records is then displayed as a web page in response to a remote display request.
